Maximising space in narrow bathrooms – the new LIGA hinged folding 3-sided shower enclosure

Many homes from stylish old city buildings to 70s housing construction have narrow bathrooms. This special solution can now be refitted to meet the needs of different generations and users.

A lot of bathrooms have a footprint of less than 6 m². Many are also narrow in shape, making all fixed objects unavoidable trip hazards. Kermi's hinged folding doors prove this doesn't have to be the case.

When extended, the new LIGA hinged folding 3-sided enclosure provides practical splash protection. Yet when folded back towards the wall it protrudes less than 40 cm – as good as gone. It can be installed directly beside a window, a supply shaft or on primary walling. Even when installed directly on a free expanse of wall, little protruding depth remains. And the moderate price never changes.

Available in a standard height of 2 metres, the LIGA hinged folding 3-sided enclosure can be easily and quickly installed in any narrow bathroom to create much-needed space, especially in homes accommodating people with care requirements.

PRESS RELEASE

Every LIGA hinged folding 3-sided shower enclosure can be folded towards the wall, leaving a depth of less than 40 cm. Slimline showering at affordable cost.

When extended, the LIGA folding 3-sided shower enclosure provides practical splash protection, whether assembled right by a window, on primary walling, or on a free expanse of wall.
